

Letter Of Reference

This document serves as reference for Acumen Visual Group located at 30 Riviera Drive, Markham, Ontario Canada L3R 5M1.

Acumen Visual Group is one of 23 Preferred Fabricators of Nova Polymers and is listed in our CSI 3-Part Specification. A copy of this specification can be found at NovaPolymers.com.

Nova Polymers is a manufacturer of a photosensitive material called photopolymer (name brand Novacryl®) used to manufacture Architectural & Accessible Signage (compliant with all international accessibility standards). Nova Polymers has facilities in Barcelona Spain, Sharon Australia, and Doha Qatar.

All information related to materials and how they can contribute toward earning MR, EQ and ID Credits as it relates to LEED can be found with third party verification on Arcat.com.

To become a Preferred Fabricator, a company must not only demonstrate a thorough understanding of how to fabricate the material in accordance with our processing guidelines, but also incorporate process steps to control quality, consistency and reflect the brand of Novacryl® as intended. To assure that our Preferred Fabricators are in compliance, each firm subjects themselves to annual audits of their manufacturing process as it relates to the use of materials, finishing and workflow steps that include file & film creation.

Acumen Visual Group is a Preferred Fabricator in good standing, a valued partner and has demonstrated that they are not only in compliance with the manufacturing process, but also demonstrate a position of knowledge as it relates to accessibility codes in both Canada and the US.
